Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n, representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m, representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

```
// You are using Java
import java.util.*;
class d{
    public static void main(String[] args){
        Scanner s=new Scanner(System.in);
        int n=s.nextInt();
        TreeSet<Integer> a=new TreeSet<>();
        for(int i=0;i<n;i++){
            int f=s.nextInt();
            a.add(f);
        }
        int k=0;
        int b=s.nextInt();
        //for(int i=0;i<n;i++){
        if(a.contains(b)){
            k=1;
            //break;
        }
        //}
        if(k==0){
            System.out.print(b+"is not present!");
        }
    else{
```

```
        } } System.out.print(b+" is present!");  
    } }
```

Status : Correct

Marks : 10/10
