Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Bechan Chacha is seeking help to filter out valid mobile numbers from a list provided by his crush. He can only pick his crush's number if the list contains valid mobile numbers.

A mobile number is considered valid if:

It has exactly 10 digits.It consists only of numeric values (0−9).It does not begin with zero.

Your task is to determine whether each mobile number in the list is valid or not.

Input Format

The first line contains an integer T, representing the number of mobile numbers

to check.

The next T lines each contain a string S, representing a mobile number.

Output Format

For each mobile number S, the output print "YES" if it is valid.

Otherwise, print "NO".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1
9876543210
Output: YES

Answer

```java
// You are using Java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int T = Integer.parseInt(sc.nextLine());  // number of test cases

        for (int i = 0; i < T; i++) {
            String number = sc.nextLine().trim();

            if (isValidMobile(number)) {
                System.out.println("YES");
            } else {
                System.out.println("NO");
            }
        }

        sc.close();
    }
```

```java
// Function to check validity
public static boolean isValidMobile(String num) {
    // 1. Length must be 10
    if (num.length() != 10) {
        return false;
    }
    // 2. Must contain only digits
    for (char c : num.toCharArray()) {
        if (!Character.isDigit(c)) {
            return false;
        }
    }
    // 3. First digit must not be '0'
    if (num.charAt(0) == '0') {
        return false;
    }
    return true;
}
}
```
